how a scientific paper is built

prof. dr. nicolas meseth

1 one shape for all papers
2 what goes where
3 the most common mistake
4 the abstract

readers don't read a paper from start to end, they jump to the room they need, so every room has to be where they expect it.

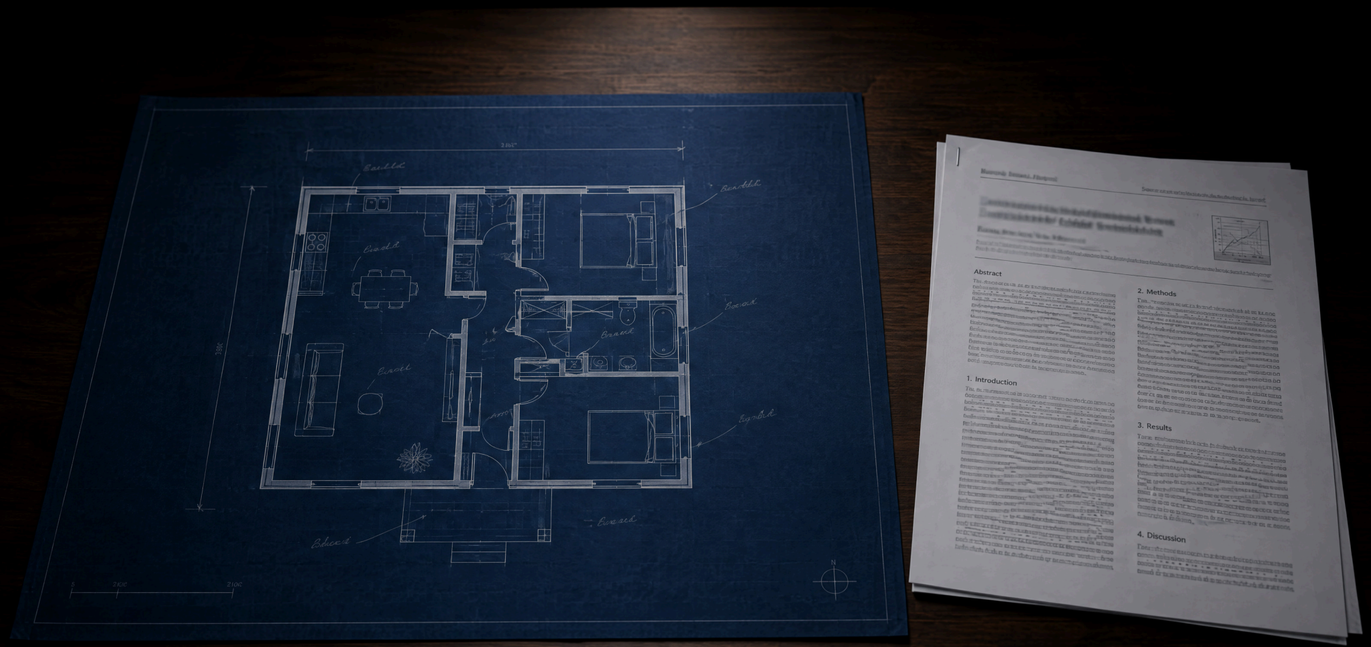

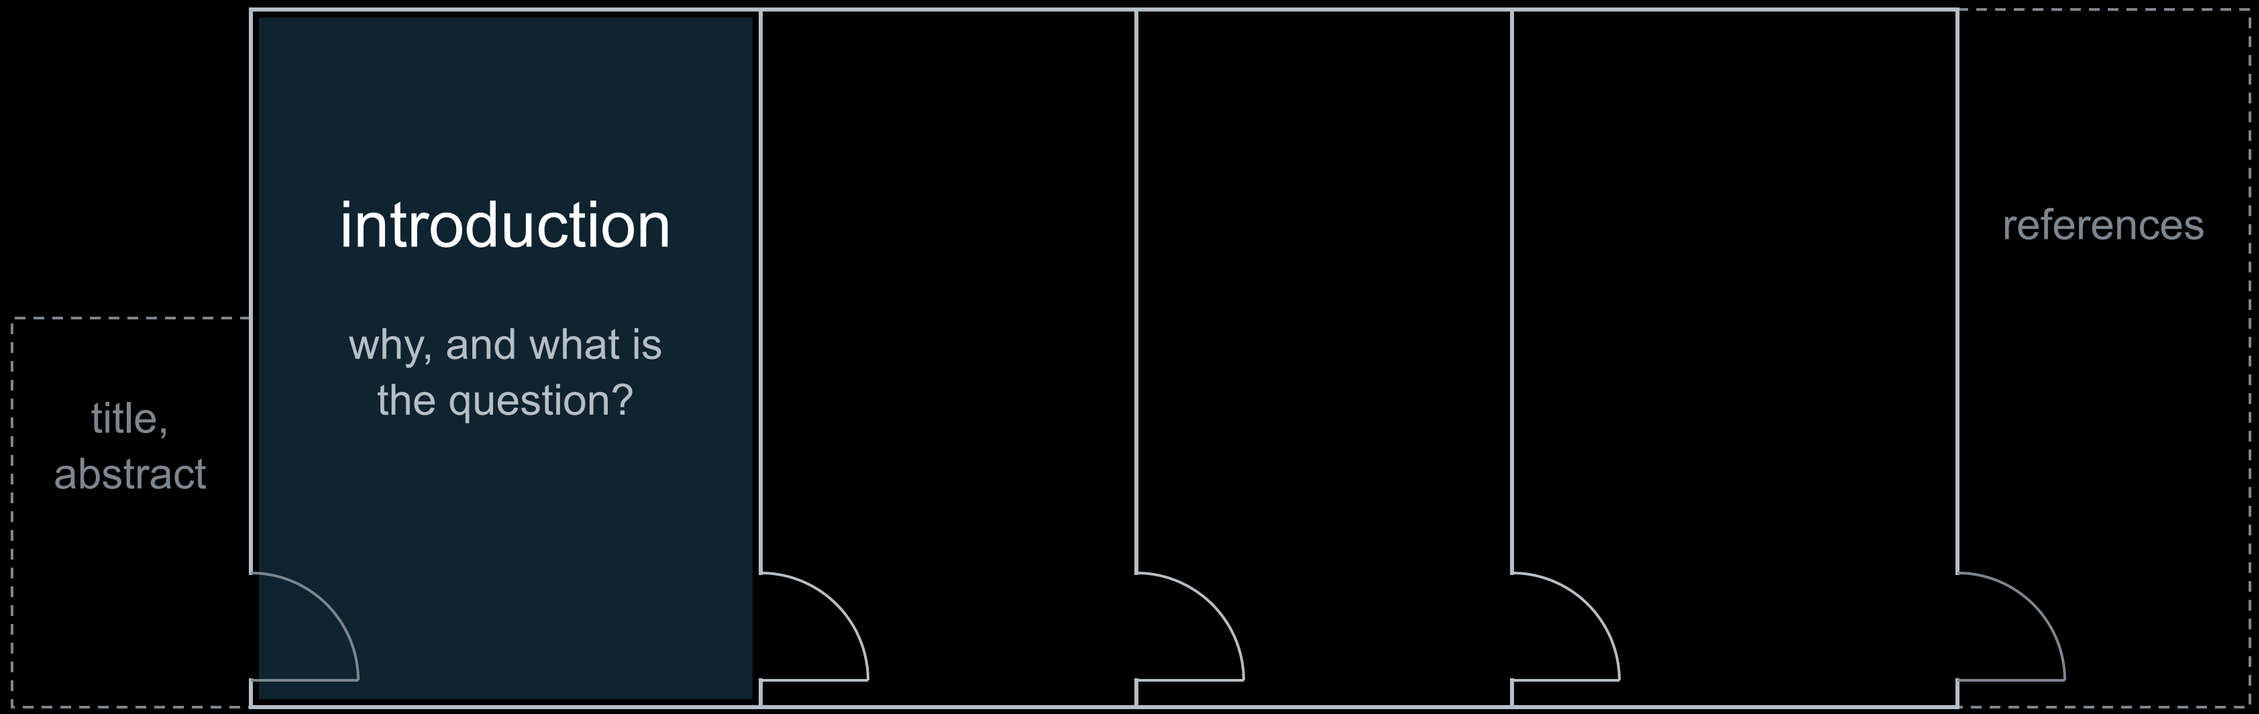

image: ai-generated (gpt-image-2.5-flare)

part 1

one shape for all papers

imrad and its proportions

imrad

one shape for all papers

imrad

one shape for all papers

imrad

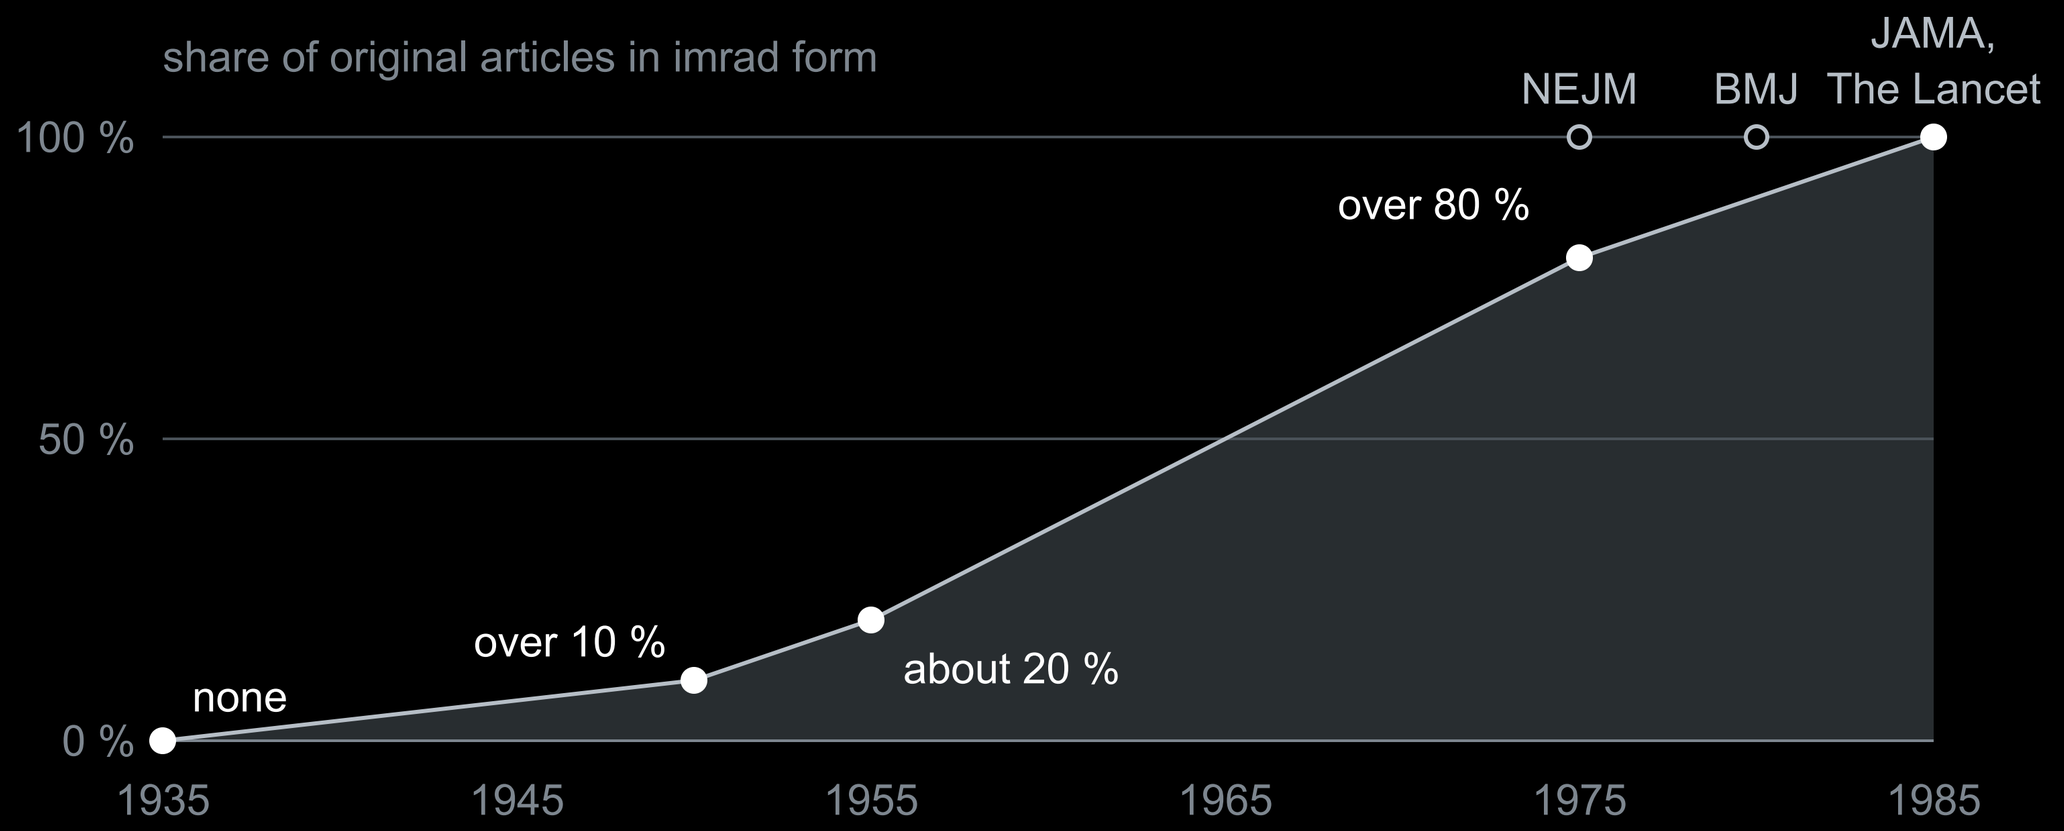

one shape for all papers

imrad

one shape for all papers

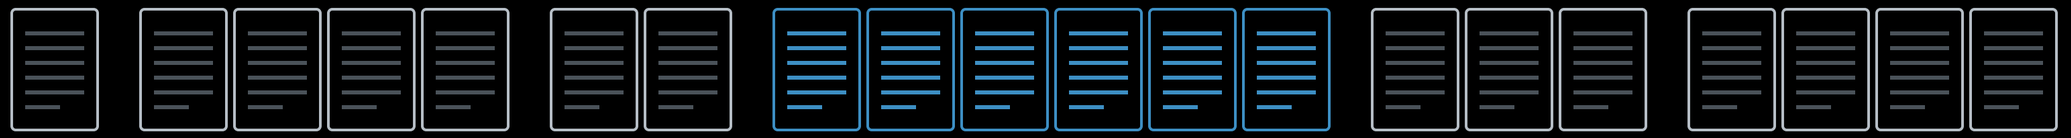

editors made imrad the rule, because readers can then jump straight to the section they need.

Sollaci & Pereira (2004), J Med Libr Assoc 92(3), 364–367: 1,297 original articles in BMJ, JAMA, The Lancet, NEJM

how long is each part?

✔ a rule of thumb for an empirical paper of 20 pages

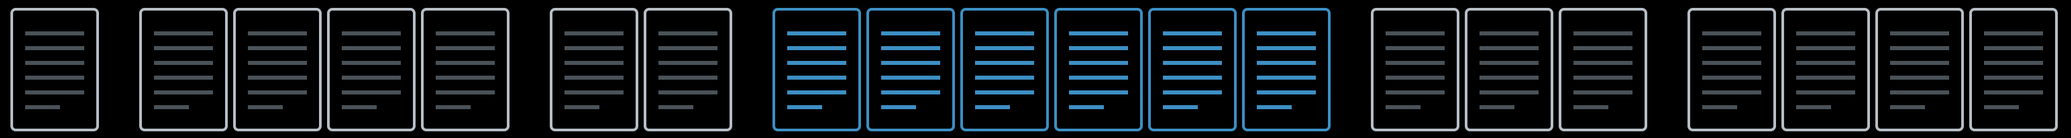

introduction theory methods **results** discussion references

the results take the most room, and the theory must not crowd them out.

after Döring (2023), Forschungsmethoden und Evaluation, 6th ed., p. 771

how long is each part?

✔ a rule of thumb for an empirical paper of 20 pages

introduction · theory · methods · **results** · discussion · references

⚠ and one with twelve pages of theory and two of results, which Döring calls unbalanced

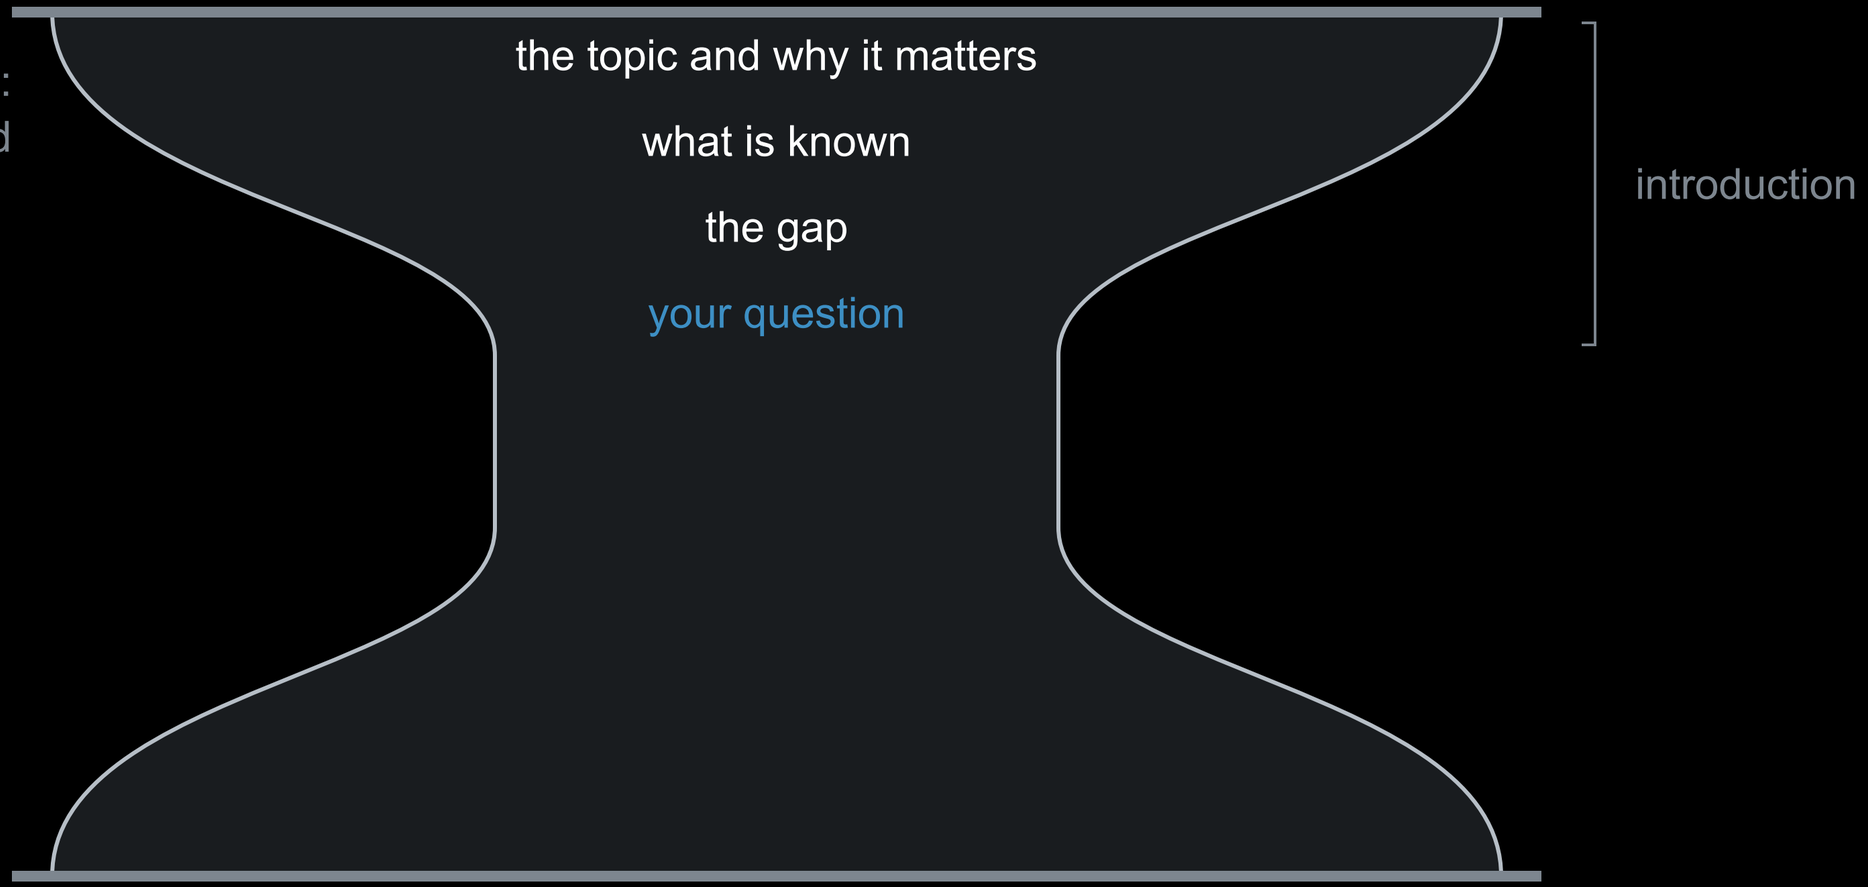

theory · **results**

the results take the most room, and the theory must not crowd them out.

after Döring (2023), Forschungsmethoden und Evaluation, 6th ed., p. 771

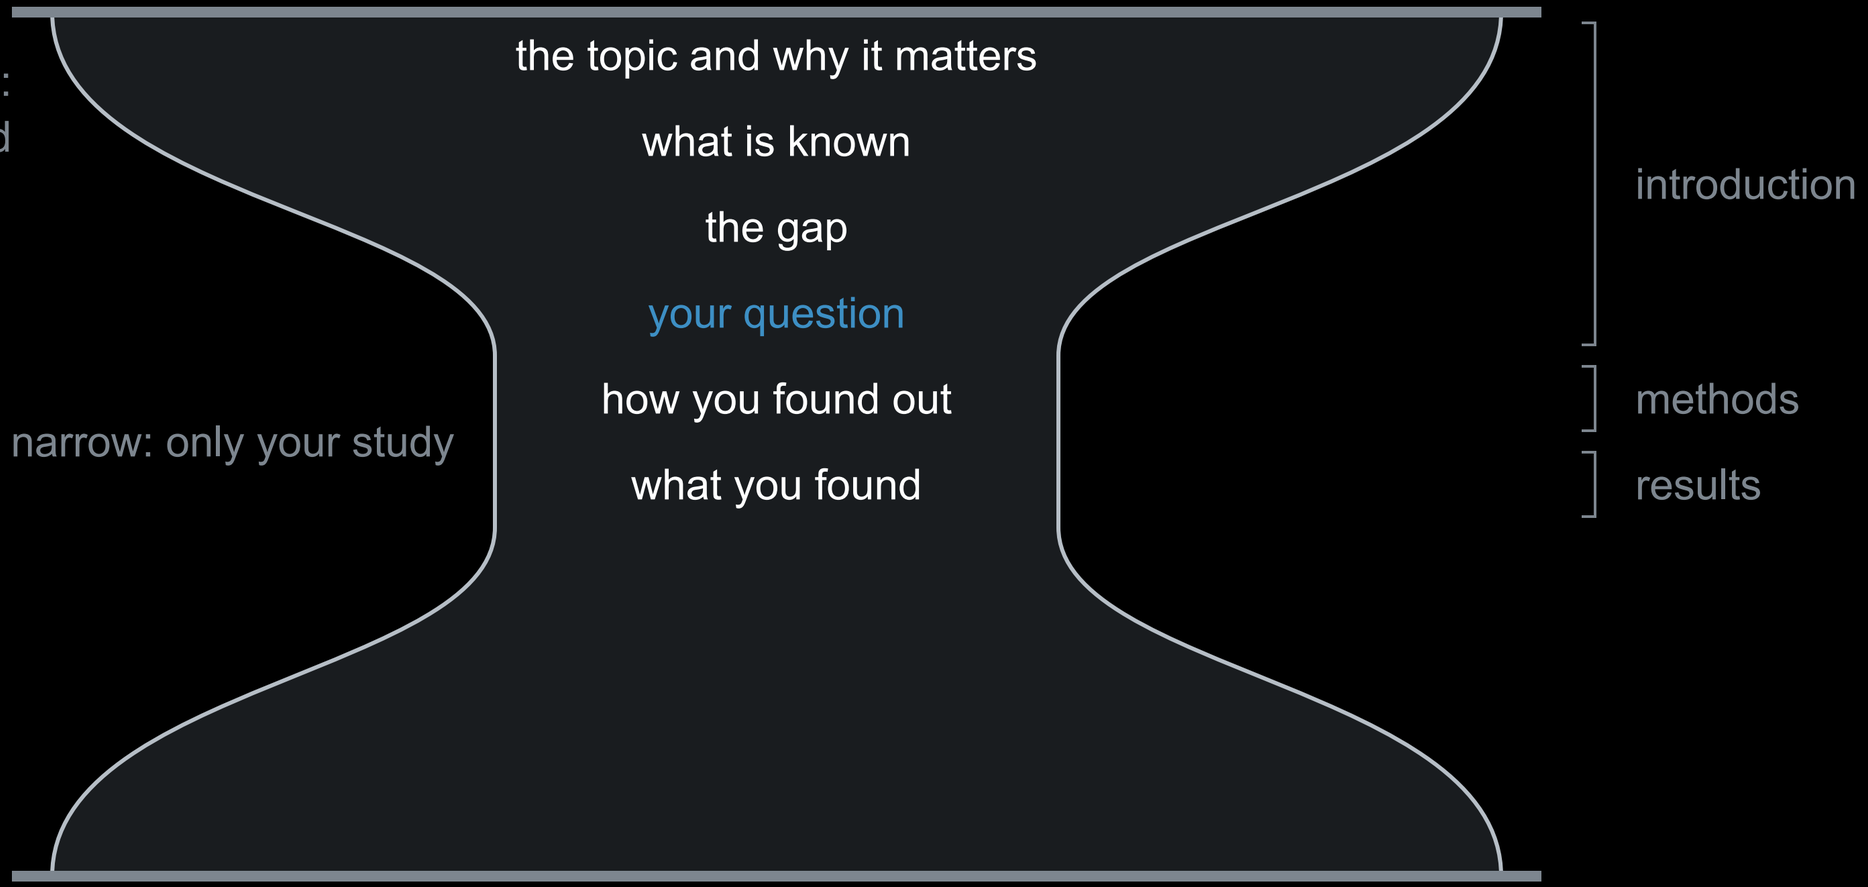

the hourglass

the introduction ends with your question, and the discussion begins with its answer.

after Cals & Kotz (2013), effective writing and publishing scientific papers, J Clin Epidemiol 66

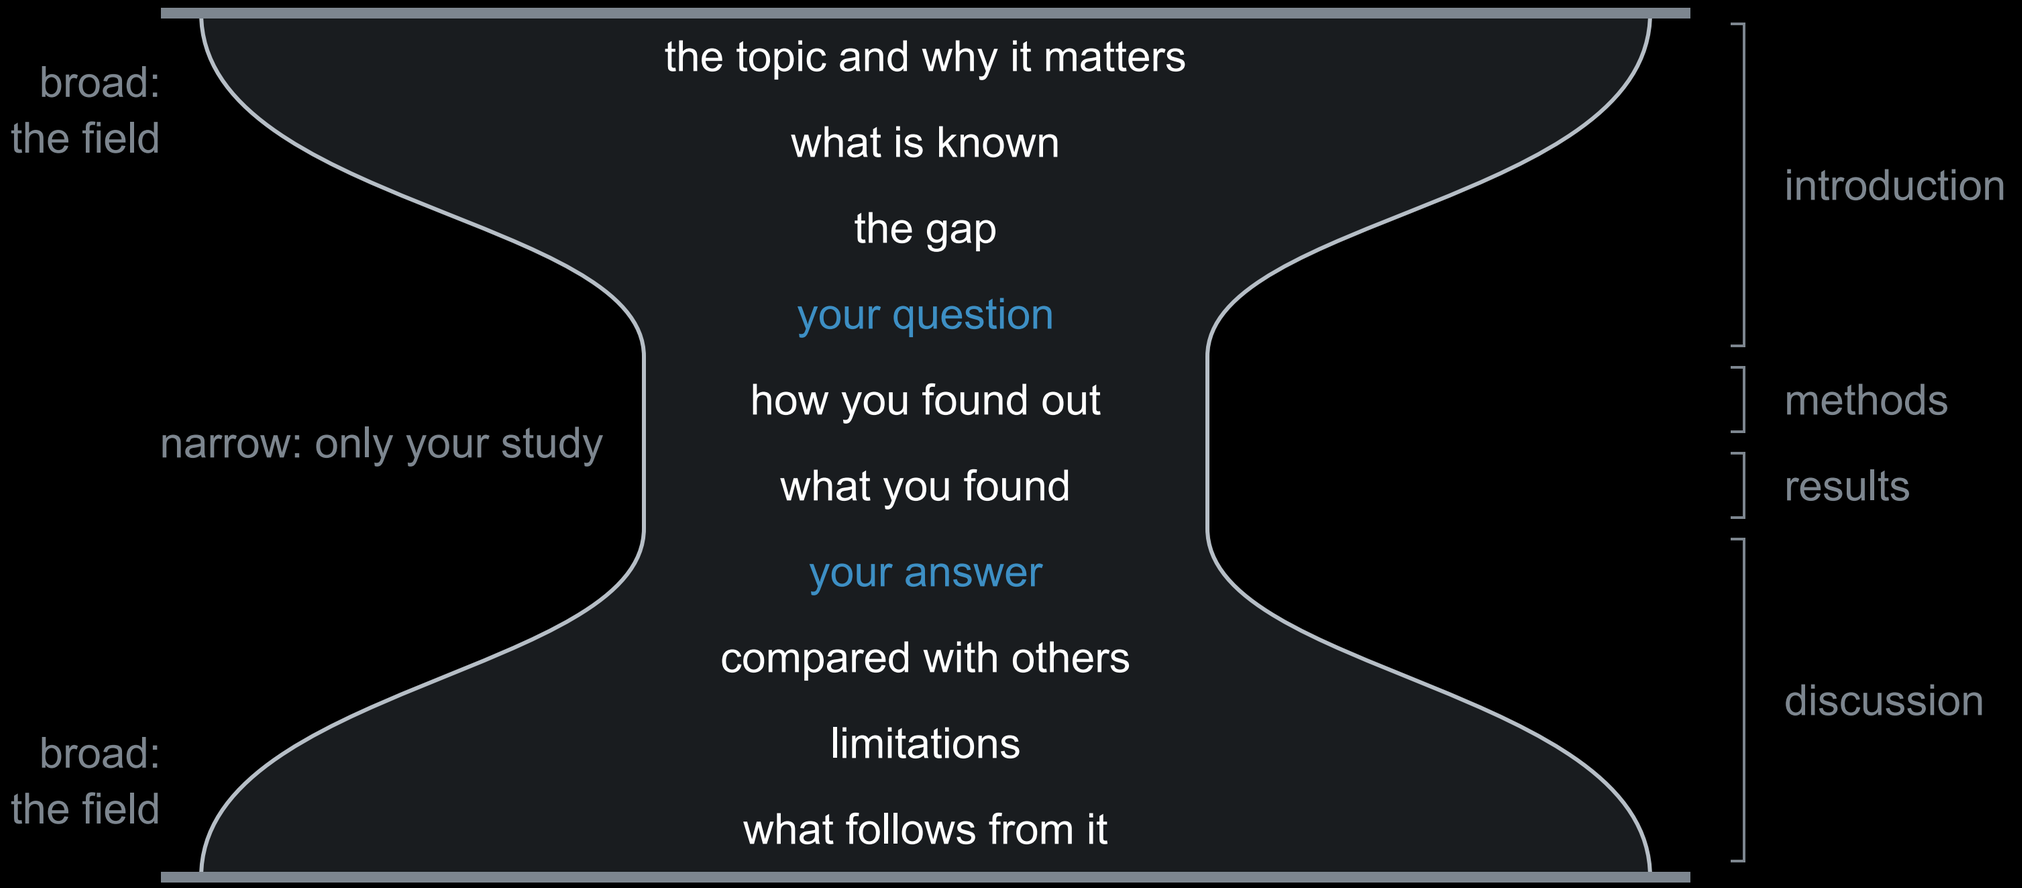

the hourglass

the introduction ends with your question, and the discussion begins with its answer.

part 2

what goes where

one job for each section

every sentence of a paper belongs in one room.

image: ai-generated (gpt-image-2.5-flare)

milk competes on price in every supermarket.

earlier studies asked why people choose plant-based milk (Dorina et al., 2025).

but whether price limits differ with diet is not known.

do price limits for milk differ by diet?

the introduction narrows from the topic to your question, and the question stands in its last paragraph.

introduction

the topic milk competes on price in every supermarket.

what is known earlier studies asked why people choose plant-based milk (Dorina et al., 2025).

the gap but whether price limits differ with diet is not known.

your question do price limits for milk differ by diet?

the introduction narrows from the topic to your question, and the question stands in its last paragraph.

example paper written for this input; structure after Cals & Kotz (2013), part III

introduction

the topic	milk competes on price in every supermarket.
what is known	earlier studies asked why people choose plant-based milk (Dorina et al., 2025).
the gap	but whether price limits differ with diet is not known.
your question	do price limits for milk differ by diet?

~~vegetarians accept higher prices.~~ → belongs in the results

the introduction narrows from the topic to your question, and the question stands in its last paragraph.

example paper written for this input; structure after Cals & Kotz (2013), part III

we reanalysed the milk and chocolate survey, an existing online survey of 2,809 adults in Germany.

619 respondents saw one of two milks and were asked from which price it would be too expensive; 611 named one.

we left out 23 prices below 0.50 € or above 10 €, which can hardly be meant for a litre, so 588 remained.

we compared the median price limit of the diet groups.

the methods are a recipe that would let someone else repeat your analysis.

example paper written for this input; APA JARS-Quant (2020); Döring (2023), p. 771

methods

data source	we reanalysed the milk and chocolate survey, an existing online survey of 2,809 adults in Germany.
measure and sample	619 respondents saw one of two milks and were asked from which price it would be too expensive; 611 named one.
cleaning	we left out 23 prices below 0.50 € or above 10 €, which can hardly be meant for a litre, so 588 remained.
analysis	we compared the median price limit of the diet groups.

the methods are a recipe that would let someone else repeat your analysis.

~~probably because they value animal welfare.~~ → belongs in the discussion

the results report what the data say, and leave what it means to the discussion.

example paper written for this input, numbers from the compact milk survey; after Döring (2023), p. 772

only vegetarians named higher price limits.

whether this reflects concern for animals,
the data cannot say.

only 28 vegetarians named a limit, and each
respondent saw only one of two milks.

a larger sample should test whether the difference holds.

the discussion opens with the answer and then widens like an upside-down funnel.

example paper written for this input; after Döring (2023), p. 770, and Cals & Kotz (2013), part VI

discussion

the answer	only vegetarians named higher price limits.
what it cannot say	whether this reflects concern for animals, the data cannot say.
limitations	only 28 vegetarians named a limit, and each respondent saw only one of two milks.
what follows	a larger sample should test whether the difference holds.

the discussion opens with the answer and then widens like an upside-down funnel.

example paper written for this input; after Döring (2023), p. 770, and Cals & Kotz (2013), part VI

discussion

the answer	only vegetarians named higher price limits.
what it cannot say	whether this reflects concern for animals, the data cannot say.
limitations	only 28 vegetarians named a limit, and each respondent saw only one of two milks.
what follows	a larger sample should test whether the difference holds.

~~women named higher price limits than men.~~ → belongs in the results

the discussion opens with the answer and then widens like an upside-down funnel.

example paper written for this input; after Döring (2023), p. 770, and Cals & Kotz (2013), part VI

part 3

the most common mistake

interpreting in the results

the most common mistake is not a wrong number, but a sentence standing in the wrong room.

image: ai-generated (gpt-image-2.5-flare)

where does this sentence belong? “vegetarians named a higher price limit, probably because they value animal welfare.”

introduction

- discussion

live.hsos.uber.space/q

where does this sentence belong? “vegetarians named a higher price limit, probably because they value animal welfare.”

- introduction
- methods
- results
- discussion

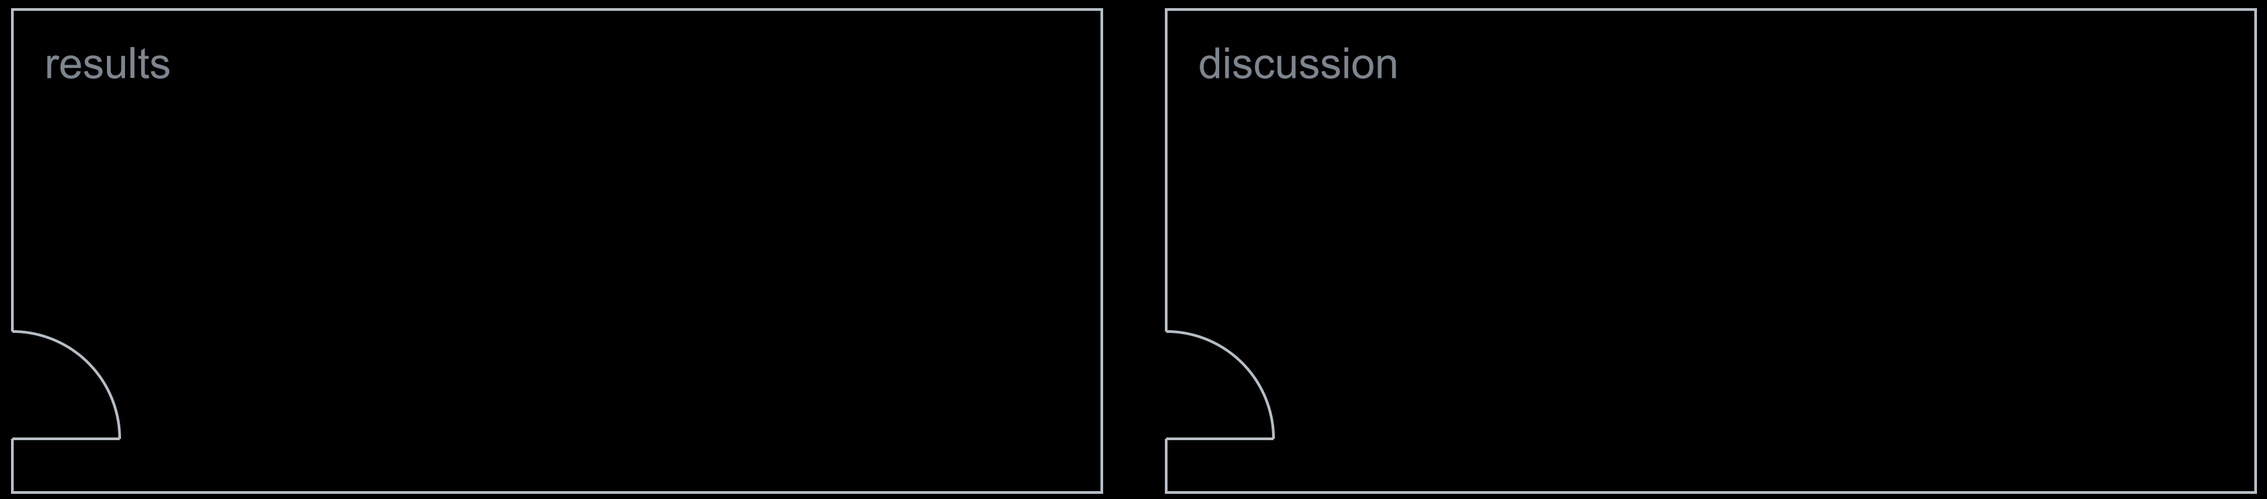

live.hsos.uber.space/q

vegetarians named a higher price limit,
probably because they value animal welfare.

a result says what the data show, and the “because” waits for the discussion.

vegetarians named a higher price limit,

probably because they value animal welfare.

a result says what the data show, and the “because” waits for the discussion.

vegetarians named a higher price limit,

probably because they value animal welfare.

results

vegetarians named a higher price limit than omnivores, a median of 2.45 € against 1.99 € (n = 28 and 362).

discussion

this may reflect that they value animal welfare, a reason the data themselves do not show.

a result says what the data show, and the “because” waits for the discussion.
